Part of our family of static dischargers, Fraser tape brushes are used on paper and plastics handling equipment, marking, labelling and coding machines.

The 406/7 and 409/11 are powerful anti-static brushes that are easy to use and install.

**PERFORMANCE**

- These anti-static brushes have a large number of highly conductive, soft stainless steel filaments with a diameter of 12 μm.
- The fine tips of the filament concentrate the static charge to ionise the air and allow the charge to flow to earth.

**ESSENTIAL QUALITIES**

- The conductive adhesive on the tape body allows it to be mounted onto a conductive and earthed part of the machine. No other fixing is required.
- There are two standard sizes:
  - 406/7 - 6 mm tape body, 7 mm fibre.
  - 409/11 - 9 mm tape body, 11 mm fibre.

**CONNECTION**

- The tape brush must be earthed. If the mounting onto the machine does not provide an earth, then a separate earth wire should be connected to the adhesive body.

**APPLICATIONS**

- Fraser tape brushes are ideal for small machinery, for example labellers, coders and cash dispensers.
- The simplicity and speed of cutting to size and installation makes them particularly suited to OEM applications.
- The flexibility of the tape brushes allows them to be cut and formed into curves and other shapes.

**SPECIFICATION**

<table>
<thead>
<tr>
<th>Construction:</th>
<th>406/7 - 6 mm wide paper body.</th>
</tr>
</thead>
<tbody>
<tr>
<td>409/11 - 9 mm wide aluminium body.</td>
<td></td>
</tr>
</tbody>
</table>

**Fibre:**

- Soft stainless steel filament, 12 μm diameter with protective EVA size for resilience/memory.
- 406/7 - 7 mm long with 1.5 mm pitch.
- 409/11 - 11 mm long with 1.5 mm pitch.

**Available Lengths:**

- Available per metre, cut to length or in 25 m reels.
