

# SOLUTIONS TO STATIC PROBLEMS

## CHARGING

## WEB PRESS FOLDER

The inside of a web printed product, such as a magazine, can be given a charge so that it opens out and drops onto a saddle binder. In this illustration two '+' 7160 Bars are putting a negative charge on the two inside layers of the printed section. These negative charges repel each other causing the product to open and allowing it to fall onto the binder.

The printed pages open to fall onto the "saddles" of the saddle stitcher to create the magazine or book.
